Selma, CA, 93662
Request for Proposal #2021-SUSD-WAN
Multi-year Contract for
E-Rate Eligible
Wide Area Network (WAN) Services

Question and Answers – Addendum 2

1. Question: How is your network composed of today?

Answer: Our Wan Network consists of an AT&T ASE service that connects all of our remote sites to our district office. Comcast provides our Fiber link to our ISP.

2. Question: How many devices do you have that need internet?

Answer: Selma Unified currently has anywhere from 3000 to 6000 devices connected to the internet at one time. We have recently purchased an additional 6000 chromebooks and 300 macbooks. We also support an additional 1000 devices and IP-dependent systems. In total we support up to 7500 devices at any one time that need internet access, while more rely on our internal IP network.

3. Question: How did we determine the need for a 10gb backbone?

Answer: This determination was based on current demands on our network. As of today, our 1 Gb backbone would not be able to effectively support any additional devices or future online curriculum as it sits today.
